

CONSTRUCTION REPORTING & RECORDING APP SYSTEM

Multiple applications within a single APP and a Web back office data system.

This reporting and recording system is the ideal solution for Construction Site managers as they all should undertake reporting, inspections, data gathering and safety & security routine checks. Giving them tools for their job results in them taking full ownership of the task, including investigations and routine site checks. This will help train them and aid the routine official audits undertaken.

A truly dynamic and innovative platform. It provides cost effective applications to deliver the broad requirements of corporates. Meeting real business needs whilst overcoming the issues faced with connectivity, the engagement of the mobile workforce, device management and integration.

EXAMPLES OF APPLICATIONS THAT CAN BUILT INTO THE SINGLE APP

REPORTING

- ACCIDENTS
- INCIDENTS
- NEAR MISS
- ASSET INSPECTION CHECKS
- SHARING OF IDEAS

CONSTRUCTION BENEFITS

Construction has been a Health & Safety issue for years, BUT it is getting better due to ongoing training and education. The issue is that construction sites are very complex with a high degree of potential risks around every corner.

To maintain budget, the tasks have to be undertaken properly and on time. But cutting corners to save time or just a bad craftsman are both potential hazards.

But the fundamental task of producing the build at the right time, at the right cost and safely are all very high in the agenda.

Providing them the tools eliminates all Head Office paperwork and enables automatic checks on Site Managers to ensure routine weekly/monthly checks are carried out.

Making the task quicker, simpler and more intuitive ensures gaining the valuable reports and records, ensures processes are more robust, data more accurate and ultimately less demanding to deliver for all.

The Site Manager tools are now available!

WHAT OUR CLIENTS SAY

We have eleven tools and applications combined into one corporate app with successful data integration into an existing back office logging and action tracking system. It surpassed expectations in terms of delivery date, innovative scope, system robustness and user experience, at all levels.

INSPECTION & MANAGEMENT

- SAFETY CHECKS

WANT TO KNOW MORE?

WEB BACK END

A very powerful, multiple application system. Designed so the Client can define their own data recording requirements.

A highly dynamic, user definable reporting and graph tool enabling the Client to create and save standard templates for use again.

APP FEATURES

Apart from the standard date pickers, lookups etc., it also features some dynamic benefits.

Part of Body Diagram. Select the part, the detail of the part and then the type of injury.

Voice input - Where there is a memo on the APP, voice recognition kicks in to make it easier.

3 Photos can be added and the issue highlighted.

GDPR compliant as it is a pull system only.

Changes to data structures, lookup table etc. are supported in the contract so nothing else to pay.

Built in guidance to help the Users.

We are ISO 27001 accredited.

"Give us a call and talk through what issue or opportunity you are facing. We have many years of working with Corporate Companies, so it is usually something we have come across before. We are keen to help you progress dynamically"
